

Project 2

HTML 5 AND CSS

Build a Responsive Grid CSS Website Layout From Scratch

SUBMISSION DATE: 7 AUG 2018 @16:00

Instructions

1. Create a folder called Project 2 to save your work.
2. Follow along with the video to build a responsive grid CSS website layout in atom.
<https://www.youtube.com/watch?v=moBhzSC455o>
But, make it personal. Choose your own images, text and prices (in Rand).

This time, don't use a style block in your HTML folder, but create a separate file called style.css.

3. You will encounter some new terms in the video. Make sure you understand them to build your coding vocabulary.

Draw-up a personal glossary of terms you would like to remember. Save to your Google Drive folder (use google docs)

Here is a start:

Class –

ID –

Section -

Navigation Bar –

Header –

Footer –

Title -
